

# HAIKU

## Haiku Operating System

Haiku is an open source operating system currently in development designed from the ground up for desktop computing.

Inspired by the Be Operating System, Haiku aims to provide users of all levels with a personal computing experience that is simple yet powerful, and void of any unnecessary complexities.

## Why Haiku?

As a tool, software is a means to an end, and not an end in itself. The BeOS introduced progressive concepts and technologies that we believe represent the ideal means to the end of desktop computing. Haiku will be the realization of those concepts and technologies in the form of an operating system that is open source and free.

## Haiku at SCaLE 5x

- Booth #42
- “Haiku Technology Insight” BoF  
Feb 11, 7:00PM, Midway Conference Room
